

> Menu

loading.js

A **loading** file can create instant loading states built on [Suspense](#).

By default, this file is a [Server Component](#) - but can also be used as a Client Component through the `"use client"` directive.

 app/feed/loading.tsx

TypeScript ▾

```
1  export default function Loading() {  
2    // Or a custom loading skeleton component  
3    return <p>Loading...</p>  
4  }
```

Loading UI components do not accept any parameters.

Good to know:

- While designing loading UI, you may find it helpful to use the [React Developer Tools](#) [↗] to manually toggle Suspense boundaries.
